Write an argument:
Should your local district spend money building bicycle paths?

Cars are an extremely popular mode of transport, with most families having at least one car. They provide an alternative to cycling which is safer and more comfortable. However, the roads in this district are simply horrifying! Why waste precious, hard-earned money on pandering to the needs of the minority?

The state of roads in the municipality is atrocious. Half-finished repairs lie around abandoned, waiting for someone to complete them. For example, a certain street in the neighbourhood resembles a patchwork quilt with all the excavations and work being done on it, then hurriedly covered over with a rough layer of tyres of all kinds. Become stuck in the many ruts on the street, concrete. Not only is this a health and safety hazard, it is unsightly and damages the image of the whole district. Therefore, people would not want to live there. What is the point in building cycling paths when the roads desperately require fixing?
Furthermore, the majority of people use cars to get to destinations, not bicycles. Cars are more convenient and much safer, as there is no risk of falling off and injuring oneself. As a result, it is necessary to cater for car drivers' needs first rather than the cyclists' demands.

Although cycling is gradually becoming popular, the truth is that cars outnumber the few bicycles on the road. If the money was spent on bicycle paths, there would be less space for drivers, causing frustration and more traffic jams whereas the bicycle lanes would be empty.

To conclude, it is evident that repairing the roads is definitely more crucial than installing bicycle lanes. Cars are the majority on the road and pose less of a safety risk. The fixed roads will benefit the entire area.
